MAKING EASY WORK OF HARD WORK

SeedMaster 2000

THE NO-FUSS HYDROSEEDER
ANYONE CAN USE

AN EASY TO USE HYDROSEEDER THAT'S SUPER EASY TO MAINTAIN

The no-fuss hydroseeder anyone can use. The SeedMaster 2000 makes work easier by making sure civil contractors, landscapers, and hydroseeders can finish the job without having to call in the bigger machines. This one will shoot, spray and get the job done, requiring no prior training or experience.

The SeedMaster 2000 is made for contractors who want to apply a cellulose (paper) mulch and don't need fancy add-ons adding to the purchase price and maintenance costs. Our design uses less moving parts and is simpler and quicker to unblock (should it happen).

Every aspect of the SeedMaster 2000 is made with the user in mind. There's no closed components or complicated configurations to frustrate the user and cause problems. We know hydroseeders can become blocked so there's easy access to every potential source of the blockage, with no specialist tools needed to quickly remedy the issue and get the mulch pumping again.

We've also purposely made the machine for specific types of mulch, such as paper, so we can use jet agitation as opposed to paddle agitation. This dramatically reduces the moving parts needed, delivering an easy and effective hydroseeding solution that's perfect for erosion control on banks, lawn repair, and seeding new lawns.

The machine comes on its own trailer, beefed up with heavy duty axles and made sturdy for the rough and tumble of contracting life. There's an elevated working platform that makes it easier to prepare the mulch, or it can be used to help direct the spray across a larger distance.

We're always keen to add functionality without complexity, and the SeedMaster 2000 comes with a washdown hose and washdown nozzle as standard. This makes it a multi-purpose unit that can be used to keep the dust down or help clean up other machinery when mulching isn't needed.

WHY YOU'LL USE THE SEEDMASTER 2000

- **Jet agitation** makes for low-maintenance mixing at its best, with less moving parts, less complications, and less headaches. Just thoroughly effective mixing.
- **There's an elevated walkway with integrated mulch mixing platform.** We've made this machine to be functional and usable. There's no need to clamber up or climb up. You walk up, load up, and then walk away. Easy.
- **Use the same machine for dust suppression,** washing down machinery, and watering trees. The SeedMaster is built to do more than one job, making choosing it as easy as using it!
- **Hot Work Water Compliance** is taken care of, with the SiteMaster 2000 ideal for fire risk control for Hot Work (welding, cutting etc) where permit conditions specify water source availability, de-cluttering the working environment and adding safety for extended operational hours.
- **It fits anywhere and everywhere.** Towable behind regular utes, it's small enough to fit where you need it and it'll get to places the big machines can't.
- **Anyone from your team can use this machine.** The controls are intuitive and no experience is required.
- **You can rely on it.** The Honda engine is probably the most reliable electric start motor on the market.

SEEDMASTER 2000

1 Polyethylene 2000L Tank:
Durable and lightweight

2 Adjustable Washdown Nozzle:
Ideal for wash down or water supply when not in hydroseeding mode.

3 Adjustable Height Dust Suppression / Flood Jet Nozzle:
Better utilisation of machine when not seeding.

4 Heavy Duty Hose Reels: Capable of handling up to 50m of wash down hose

5 Honda Electric Start High Flow Water Pump: Designed to handle the heavy abrasive slurry of hydroseeding mulch.

6 Compact Design: Means you can access areas you can't get to with an oversized Hydro Seeder.

FEATURES & BENEFITS

7

Heavy Duty Drawbar: Reliable and sturdy for towing.

8

Fully Galvanized Chassis: Ensures longevity and resistance to rust

9

Braked Trailer: Enhanced safety during transportation

10

Large Filling Lid: Complete with platform to place mulch bales. Also gives easy access for maintenance and cleaning

11

Handrail and stepped mudguard with anti-slip tape. Operators have found it safe and efficient.

12

2-inch Remote Filler: Equipped with camlock connections for quick and secure filling

13

Easy-to-Clean Manifold: Quicker easier servicing of blockages and cleaning

SPECIFICATIONS

FEATURE

Honda Engine Model	Honda GX390 Electric Start 13HP
Coverage (per tank)	400-500 SQM
Agitation Type	Jet
Pump Flow	1400L/Min
Hydroseed Hose Length	40 Metres
Washdown Hose Length	25 Metres

Trailer Specifications:

- **Dimensions (LxWxH):** 4500×2000×2300mm
- **Weight (Empty):** 1180kg
- **Weight (With Water):** 3180kg
- **Axles:** Tandem 3500kg Rated
- **Dual Coupling Tow Hitch:** 1-7/8"
- **Tire Size:** 15 inches
- **Braking System:** Mechanical

THIS IS VERY CLEVER

Te Weka is a unique conservation, land and residential estate under development in the Tuki Tuki Valley. One of the last permitted development areas in a location of outstanding natural beauty, getting the landscaping for the subdivision perfect is a must. That's where Will Coltart and the SeedMaster 1000 come in.

"We've been using the SeedMaster 1000 for sowing berms" says Will. "It's really useful for flatter areas and shallow gradients. We're been sowing berms adjacent to roads, and some small faces, and it works great for them."

Will uses the SeedMaster with a cellulose (paper) mulch, which is exactly what the machine was designed for. We did this to avoid the fancy add-ons that probably wouldn't get used, allowing us to reduce the number of moving parts, and making the SeedMaster easier to unblock. After all, every hydroseeder can get blocked. It's the ease of unblocking that eases frustrations when it does happen! Indeed, ease is a word that seems to crop up a lot in conversations when discussing the SeedMaster. Particularly when it comes to getting it into position...

"It's very easy to get around on site. We can do smaller areas, we can do it ourselves, and there's less liaising with external parties. For the scale of the developments, we'd normally use large hydro seeders but that takes a lot of organising and it's difficult to fit them around other machinery. When you have a busy civil works site, full size mulching trucks have trouble squeezing past concrete trucks and others on site - you just can't do it. The SeedMaster makes it easier to schedule everything." explains Will.

He raises a great point. The SeedMaster is small and maneuverable, while the output is impressively large. For civil contractors and landscapers, the SeedMaster works around other machinery and there's limited or no impact on the rest of the operation. It helps that SeedMaster is easy to use, too.

"All the valves are nice, large, and simple to turn. It's a well designed piece of kit and it seems like some thought has been put into the ergonomics of it all, which is impressive to see."

Will is right, again. Part of our design ethos is to make machines that anyone can use, and keep using. So the controls are intuitive and their upkeep is straightforward. Taking it a step further, there's some thought that goes into exactly how the machine is used too, and this is where the SeedMaster really stands out.

We added a working platform to make it easier to add the mulch mix. But it also makes it easier to do the actual job of mulching, as Will explains..

The walk-up platform means that as you are towing the SeedMaster down the road, one crew member can stand on the platform and spray as the driver creeps forward. With others, you park, run the hose all the way out, then start walking back, recoil the hose, move, and repeat again every 40 minutes. Not with the SeedMaster - and this is very clever.
